No, it does not.  Q. And when you got this, did you say, oh, if you've got 93 CVS stores that are of concern with respect to oxycodones, stop shipping? Did you order that at this point when you got this?  A. To my knowledge, no.  Q. Did you tell them, this plan to set up a call with CVS in the future, that's not adequate, we have a crisis going on in this country? Did you tell them that?  A. I don't recall stating that or telling them that.  Q. And nobody's doing any individual investigation of any single one of these 93 stores? You're going to call corporate CVS sometime in the future; that's the plan, correct?  A. 4 A. 1987 I joined the company with a 5 subsidiary company in the transportation group, 6 transportation and warehousing. And that company 7 transitioned to the McKesson Drug Company in roughly 8 1991. Was in a staff role for a short period of 9 time, a staff role in transportation.

Then I became the Distribution Center Manager in Sacramento, promoted to the Vice President of Distribution Operations for the Western Region. It was a newly-created position.

And subsequently, in roughly 1996, I was promoted to the Senior Vice President of Distribution for McKesson Pharmaceutical.

- 17 And when did you become Senior Vice 18 President of Distribution for McKesson
- 20 A. It was 1996. I don't remember 21 exactly when in '96.

June of 2015.

- 22 Q. And that was also the position you 23 held when you retired from McKesson; is that correct?
  - Yes, it was.

Pharmaceutical?

25 When did you retire? Page 360

- Regulatory Affairs Group was in there, and I had a group that was responsible for construction and building of our distribution centers.
- Q. You mentioned Regulatory Affairs. What kind of regulatory affairs matters were you responsible for as Senior Vice President of operations -- distribution operations, I should say?
- A. McKesson, and the wholesalers as an industry, are highly regulated. We have responsibilities for a number of regulatory requirements. The FAA, the Department of Transportation, DOT, OSHA. We had hazardous material requirements. Certainly we had responsibility for compliance with DEA regulations. And various state and local regulations as well.
- Q. What was involved in the handling of controlled substances in particular?
- A. Our -- our distribution network in handling controlled substances was complex. The requirements under the federal code ensure -- wanted to ensure that we had systems in place to prevent diversion, primarily around security, as the code spelled out.

And so the inside of our buildings, the controlled substances divided into two major areas.

Page 359

You've mentioned today that your former employer, McKesson, is a wholesale distributor of pharmaceuticals. Can you describe how that business operates at a high level?

A. At a high level, McKesson, as the other major distributors operate, we purchase pharmaceuticals and medicines from the manufacturers. We virtually warehoused all of the various medications of manufacturers in our warehouses.

And on a daily basis, we supplied those pharmaceuticals to pharmacies. And the major groups of pharmacies that we had were -- are independent pharmacies, single owner; or generally our retail national account customers, which were the large chains, like Rite Aid, and CVS and Walmart; our hospital group; and then the federal government.

- Q. And briefly, what were your job responsibilities as Senior Vice President of distribution operations at McKesson?
- A. I was the senior staff operations person for McKesson. I had the overall responsibility for the distribution network. On my staff I had a support team made up of

a Transportation Group, an I.T. Support Group, our

Page 361

- 4 substances were stored in a locked and secured cage.
- 5 There was requirements for alarm. The physical --
- 6 the physical construction of both the vault and the 7

cage were specified under regulation.

And, in addition, we had reporting requirements to the DEA, the ARCOS reporting, which was the month-end reporting of all of our sales. We needed to reconcile all of our receipts and all of our sales and our inventory, along with the physical inventory, to ensure that we could account for each and every one of the controlled substances that was in our possession that was reportable.

We had reporting requirements on suspicious orders. Our suspicious order reporting we called at the time -- prior to 2008 we gave it a moniker that said -- basically a report number called DU45, and we provided that suspicious order reporting to the local DEA field offices, as required.

Q. And you described the DU45 report. What was the DU45 report exactly?

A. The DU45 was a report that reviewed sales of customers' purchases of controlled

- Q. And over what period did McKesson generate the DU45 report for the purpose of reporting to DEA?
- A. I'm not certain when we started to provide that report. But during my tenure there, we -- at McKesson we provided that report up until the 2008 time frame, at which time, as a result of our Settlement Agreement with DEA, we ceased providing that report to the DEA.
- Q. When you first became Senior Vice President of Distribution Operations back in 1996, what was McKesson's relationship with the DEA like?
- A. I think I would best describe that relationship as collaborative. On a regular basis our distribution centers could engage local field offices on inquiries and questions.

Conversely, DEA would contact us at a
 headquarters level, our senior management, my
 predecessor. And my regulatory team could pick up

Page 364

- Washington, D.C., in which we reviewed the Florida
- 2 and the Internet pharmacies and -- with
- 3 Mr. Rannazzisi and other members of his staff.
  4 O Who -- other than the people you in
  - Q. Who -- other than the people you just mentioned, who attended that January 2006 meeting? Maybe starting from McKesson.
  - A. My recollection is I attended; Bill Mahoney, who was our Distribution Center Manager in Florida; John Gilbert, who is our outside counsel; and I believe that Gary Hilliard, who was on our Regulatory team, also participated in that meeting from McKesson.

From DEA, Mr. Rannazzisi, their outside counsel, and one or two other members of his Diversion Control staff.

- Q. What message did you take out of the January 2006 meeting at DEA headquarters?
- A. I -- the messages that I took out were several. First and foremost, was DEA's concern, it was very clear to us, over the Internet pharmacies that they identified in Florida. You know, Mr. Rannazzisi unexpectedly asked to have us surrender our DEA registration for our Florida Distribution Center.

And in the course of discussions, there were

Page 363

- the phone and have conversations back and forth with the DEA regarding various matters.
- Q. And how, if at all, did McKesson's relationship with the DEA change over time?
- A. Well, in the -- it clearly in the 2005 -- late 2005/2006 time frame, after the new administrator was in place, I would say McKesson's relationship with DEA became more confrontational.
- Q. And you described earlier to Mr. Kennedy that you had a five-year period, I think it was, when you ran McKesson's Six Sigma program; is that correct?
- A. That's correct. Roughly, in 2000 to 2005 I was not the Senior Vice President of Operations, Distribution Operations, and did not have responsibility for Regulatory during that time frame, but was responsible for our Six Sigma process improvement.
- Q. So starting with your return to the Senior Vice President of Distribution Operations' position in 2005, what interactions did you personally have with DEA?
- A. The first personal interaction I had with DEA was the -- was the January 6, 2000 -- or excuse me, January 2006 meeting that we had in

Page 365

- a couple of key themes that came out. One is that we
- 2 had a responsibility to -- which it, quite frankly,
- 3 was the first that we had ever heard from DEA that
- 4 we -- you know, his statement was, why would you ever
- 5 ship an order that you identified as suspicious? And
- 6 he viewed our DU45 report as inadequate and not
- 7 meeting the -- their needs.

He -- and, again, this is the first that we had had any indication, after many, many years of providing it, that there was any concern over our DU45, our suspicious order reporting.

- Q. You mentioned that Mr. Rannazzisi, or DEA, expressed that the DU45 report was inadequate. What -- what was the issue that DEA raised with the DU45 report?
- A. I think it was -- as I -- as I interpreted the discussion, it was really a matter of just the volume -- he used the term "excessive order report," and that the volume of data was -- was not usable, you know, to DEA. And it was just -- didn't view it as a valuable report to -- you know that they could use to follow up on.
- Q. And so in the area of suspicious order reporting, what was the message you received from DEA at the January 2006 meeting?

Page 366

A. I came away from there that -- with a very clear view that report only orders that are truly suspicious. That the requirement for -- the bar for reporting suspicious orders, because of his statement that, you know, we -- a suspicious order, a suspicious customer should not receive any controlled substances, we went away from there with a very serious view around correlating the suspicious orders with ceasing selling controlled substances to a customer.

Q. So you've described a message that once deemed suspicious, an order should not be shipped. And you've described a message that, I think you said, a customer should not receive any order of controlled substances if an order placed is deemed suspicious?

A. No. If we -- if we deem that customer to have a suspicious pattern of orders or a business model that was suspicious, then we should cease selling controlled substances to them altogether.

Q. And you mentioned that some of these messages, it was the first time you had heard these things. And could you describe your reaction to these messages that you've explained today.

Page 368

that the DEA didn't make any changes in their DEA registration, but we made the choice to cease selling controlled substances to them.

We initiated -- we went back and initiated the development of a new program, which evolved into what we called the LDMP, which was the Lifestyle Drug Monitoring Program. And primarily named because during the meeting the DEA had used the term "lifestyle drugs" to identify four drugs of concern that they identified as part of the Internet

pharmacy, being the oxycodone, the hydrocodone,pyrazoline and Phentermine.

MS. HENN: I'd like to show you an exhibit. Let's get this marked as 84.

Q. Mr. Walker, the court reporter handed you an Exhibit No. -- that's been marked 804. The Bates number is -571361 through -65.

MR. KENNEDY: Counsel, 804, is this a defense exhibit?

24 MS. HENN: It is.

MR. KENNEDY: Okay. Defense Exhibit 804.

Page 367

A. Well, the first reaction I had was it was significantly different than the interaction that we had had with DEA in the past. It was clear that there was a different view of the distributors. And from that we really made the determination that we needed to go back and follow up and review our processes and our -- in order to try to, you know -- the message was, from the DEA, is that there's an issue. We're trying to solve it.

Our view was, is we've always collaborated with DEA. So I took what was being said and tried to, without specific guidance from them, to establish a go-forward modification to our overall monitoring program.

Q. So did you take -- why don't you describe any actions that you took following up on that January 2006 meeting and the messages that you received.

A. Specifically after the meeting in 2007, we went back, and we immediately conducted additional review and site visits to the pharmacies that they had identified to us during the meeting.

We subsequently ceased selling controlled substances to those pharmacies and reported such to the DEA. Even though the -- you know, we learned Page 369

A. Yes, I do.

Q. What is Exhibit 804?

This is a letter from Paul Julian, our President, one of the senior members of McKesson, to Mr. Rannazzisi in response to the meeting that we had with DEA, in which he -- at a high level what he has done is summarize the actions that we have taken, how seriously we viewed the meeting, and how seriously we reviewed -- or viewed our regulatory obligations, and provided him examples of actions that we had taken subsequent to the meeting.

Q. And at the time this letter was sent to Mr. Rannazzisi, did you receive a copy of this letter?

1 Q. And what did this guidance from DEA 2 mean, in terms of the suspicious order reporting that 3 McKesson would be making to the DEA, if you compare 4 the old DU45 system and this new system put in place 5 pursuant to this guidance? 6

A. First, is that the numbers of suspicious orders that we would report would be significantly less because the methodology in which we were determining whether something was suspicious was far more involved.

We would also, in the course of this, be answering their question around ensuring that we were providing them with usable information.

And those were our primary intents, was to ensure that our suspicious order reporting was complying with what -- what limited information they provided us in that January 6 meeting.

Q. And under the new system McKesson put in place pursuant to this guidance from DEA, what was the frequency of the reports of suspicious orders?

A. I don't know that I can answer it in terms of a specific frequency, other than there were a lot fewer Suspicious Order Reports going -- going to DEA.

Did this make sense to you?

Page 392

A. No. I mean, the ARCOS reporting requirement remained the same. We continued to report and supply DEA with all of the ARCOS data throughout this process. The ARCOS reporting was uninterrupted and not changed.

My view was that we were -- in our suspicious order and our Controlled Substance Monitoring Program, we were really focused on identifying pharmacies that after the due diligence

7 we had a high degree of confidence were not 8 necessarily complying with their regulatory

9 obligations and potentially diverting controlled

10 substances. And we created as a -- as a very high 11 standard to report the term suspicious order. And

13 number of customers or pharmacies that we were 14 reporting to the DEA. And very specifically trying

2.1

We were going to monitor our orders against the thresholds that we established, you know, for the customers, and that we would block any orders that exceeded the threshold. So, again, if the order came through, and that quantity ordered exceeded the threshold, the order was blocked.

A review and escalation process. Once the blocked order was in place, how we would report suspicious orders and any other reports, and offered up any other analysis or reports the DEA could identify that could help them in their enforcement activities.

Q. And turning to page 6, slide 6 of your presentation to the DEA.

What did you tell the DEA about steps that McKesson was going to take with respect to existing customers?

A. We -- there were -- there were several points that we covered with DEA, that from an existing customer standpoint, we would establish the thresholds. We would review their 12-month purchase history. We would establish default volumes or quantities in each one of the controlled substances.

Page 399

We emphasized that unlike the LDMP, that the CSMP covered all of the controlled substances that we distributed.

There's a lot of focus around the controls that have been abused, but there is a total of -- if I recall, somewhere in the area of the mid 80s, different control base-codes that we also managed under this program.

So we had to establish, and we explained to them we had to establish thresholds for every base code for every customer that we had.

We indicated that we were going to conduct site visits to customers, and based on priority. They had in the meetings communicated to us that their primary concern in pharmacies that had to date -- to that date, had displayed the greater propensity for illegal -- what they called illegal activity, were independent pharmacies. So we viewed that we needed to prioritize the independents first, focusing on the lifestyle drugs, and ensuring that we understood, you know, where pharmacies had dose quantities that were greater than 25,000.

We were also clear with them at the time that we -- how we were going to interact with our retail national accounts. That we would utilize the Page 400

retail national accounts' internal regulatory and loss prevention security organizations to assist us as a insight into their pharmacy practices and their overall control.

Q. And one quick question about the analysis of 12-month purchase history that you discussed. It talks -- the slide says, "Set threshold if above family code default." And then it says, "Default if below."

What does "default if below" mean?

A. If, depending on the -- on the generic base code -- the family code was basically the size of the pharmacy. If their 12-month purchase history, let's just say, it was a fairly large pharmacy but their behavior in terms of purchases or controlled substances was significantly less than what is the average, if you will, for that particular size pharmacy was, we would default to a lower number.

So we would always trying to establish thresholds at a -- at a low number to ensure that all the pharmacies were being evaluated appropriately.

Q. And turning to page -- slide 9. What did you communicate with DEA during the July 2008 meeting about the blocking of orders under the CSMP

Page 401

program at McKesson?

A. In the meeting and in discussions with them, that we explained very clearly that we would block the orders that exceeded threshold. That it was specific to the base code and specific to the registrant.

And that was a critical piece because many customers have in our system multiple customer numbers. And the DEA's -- in prior meetings it had expressed some concern of making sure that we understood all the sales that went to a customer.

So we made sure that they understood it was specific to their registrant, which is a unique number for the DEA, even though there might be multiple McKesson customer numbers.

There was no override. There was not going to be any override capability. Any changes in the threshold would be -- would be required. And then a threshold change process was going to be implemented to adjust any thresholds with the documentation.

And the customer notification, we were very clear that we would notify -- that DEA -- the DEA that we would alert the customer if they were approaching their threshold along with the -- an invoice notification so that the customers were aware

Q. Turn to slide 13. What information did you provide to DEA during this July 2008 meeting about the suspicious order reporting component of the CSMP?

A. We communicated that -- we understood that there was still the ongoing work that we were prepared to stop, the DU45 reporting to DEA Field Offices at the time that they agreed and we agreed -and primarily they agreed that the format was acceptable to them in terms of the reporting.

There was -- there certainly was a lot of contact with DEA around the format and the -- and the process that we were going to go through. And, again, what we were trying to be is -- in this meeting, was clear with them that if there was a concern or there's other information that we needed to have, that they could provide it.

And, quite frankly, one of the other things we asked is to get feedback and create a feedback process on orders that were reported. We -- we

Page 404

what we could do differently, better, et cetera.

- Q. Did you have any follow-up meetings about the CSMP with the DEA after this July 2008 meeting, that you recall?
- A. Well, during -- during the meeting that we had with DEA, we -- we asked -- and, again, the reason we asked is that they were clear around wanting to have more centralized control over suspicious order reporting.

But what we wanted to do was we wanted to go to local field offices and share with the local field offices what we were doing with our Controlled Substances Monitoring Program. We did that. We took an offshoot of this document and provided that to the DRAs so that they could, in fact, have meetings with the local field offices if the field office wanted to do that. We reached out to them.

We made a number of presentations to local field offices by way of the DRAs. I'm not sure exactly how many. But we did do that. And, actually, the document that I reviewed with Mr. Kennedy earlier, I think is actually a copy of the document we shared with the local field offices.

Q. And did you get any feedback from those local field offices that reached you about the

Page 405

Page 403

wanted to understand the effectiveness of our reporting and our CSMP to understand whether we were providing them the information that they needed to manage their enforcement responsibilities for pharmacies.

- O. Did DEA provide that feedback that McKesson requested?
  - A. No, they did not.
- What was the DEA's reaction to all of this information that you provided during the July 2008 meeting about the new CSMP program you put into place?
- A. My -- my recollection of the meeting was that the DEA was -- well, first, they -- it is not their habit nor did I expect them to provide a stamp of approval on it. But their -- overall the types of discussion and the questions were positive. There was, you know, a fair amount of body language.

So my takeaway was, is that they were satisfied with the -- with what we had presented to them. And additionally, there wasn't any "you missed it." There was no direction from them that we had failed in meeting any of the components of the Memorandum of Agreement, nor did they provide any specific guidance at all on the -- on the program or

1 2008 -- or about the CSMP that McKesson put in place 2 in 2008?

A. I didn't get any specific feedback from the field office personally. The DRAs reported a generally positive response, again, not unlike like what we experienced in Washington, D.C.

- You've described your meeting at the headquarters and then the DRAs' meetings that occurred at local field offices. What, if any, other interactions did McKesson have on an ongoing basis with DEA and its distribution centers?
- A. Well, throughout this process, there is what I would call a lot of business as usual interactions that McKesson distribution centers had with the local field offices. Inquires around DEA registrations of pharmacies, you know, around expiration dates. Those are always a problem with the DEA.

If there was a report -- there needed to be a report of a theft or a loss, you know, questions around -- and procedural things, in particular around the paperwork, the ARCOS reporting. And the paperwork required with that sometimes can be confusing. So there's an ongoing relationship, just an interactive relationship.

Page 406

Additionally, the DEA continued to conduct their cyclical audit. A cyclical audit is where the DEA comes in unannounced and inspects the distribution center in a number of different areas, primarily around the recordkeeping, the security of the controlled substances, the handling, reviewing the associates that are authorized to handle controlled substances. All of that is part of the normal cyclical audit.

- Q. And what would happen if DEA found an issue during one of those cyclical audits?
- A. Excuse me. There was an Audit Report that was generated out of each one of the audits. If there were actions that needed to be taken by McKesson to correct anything that they identified in the audit, virtually all the time that I can recall, those were fairly minor issues. They were more what I would call procedural.

We made the procedural adjustments and reported back to DEA the changes that we made.

- Q. Mr. Walker, from 2008, when the CSMP was put into place, to 2012, do you know how many Suspicious Order Reports about customers were reported to the DEA by McKesson?
  - A. My recollection is that we were

Q. What is it?

A. This is a -- an email to Barbara

Boockholdt at DOA -- or excuse me, DEA, that

summarizes some actions that we -- and responses that
 we made -- needed to make to them during our meeting

with DEA in January of 2012. We had a separate meeting with DEA.

We -- they had indicated that we had only submitted two Suspicious Order Reports. Again, this was very much a surprise to us. We had no indication whatsoever from DEA that the suspicious order reporting was not reaching them.

We went back to summarize and identify all the customers that we could identify in our system that we had identified as having suspicious activity and suspicious orders in which we had ceased selling controlled substances to, summarized those to her and reported back, you know, the -- so that she had some record, specific record of actions that we had taken.

- Q. And is that list attached to your email in Exhibit 813?
- A. Yes. It's on the last page of that exhibit.
  - Q. Mr. Walker, you were asked by Mr. Kennedy about -- I think you referred to them as

Page 407

somewhere in the area of 35 to 40 different pharmacies that we reported and generated suspicious order reporting to DEA.

- Q. Did you do any analysis to total that number?
- A. We did -- we did tally up the -- and provide a report.

And the report only reflected, you know, what we report at the DEA. What is not and was not reported, because it was not a requirement to report or tallied, was the number of pharmacies that we elected not to do business with during our initial due diligence of a potential new customer. And that number of pharmacies was significantly higher than the 40 that we reported to the DEA.

- RNA chains, retail national accounts, like Rite Aid
   and CVS. Could you describe how McKesson performed
   due diligence on orders by chain pharmacies.
  - A. McKesson, as we had clearly indicated in our program, was going to utilize the regulatory and loss control -- loss control security -- they all had different names for them -- teams at the various chains.

In our interaction -- in our business interactions with the retail national accounts, they all had very strong centralized control of their pharmacies and their inventories, and we wanted to leverage the resources to -- they had to help us with understanding, know your customer.

And, again, our view was if you understood how one retail national account pharmacy operated in a given chain, they all fundamentally operated the same way because of the heavy centralized control that they had.

- Q. Mr. Walker, how would you characterize McKesson's efforts to comply with its regulatory responsibilities?
- A. I would -- I would -- I would say that it is a core competency and something that individuals, particularly in our operations group,

MS. HENN: Objection to form.  BY MR. KENNEDY:  Q. Could we agree to that, sir?  A. I don't agree with that statement. I strongly believe that we were executing and doing everything in our capability that we could to manage our Controlled Substance Monitoring Program.  Q. And the FDA [sic] disagreed when they fined you \$150 million; correct?  MS. HENN: Objection to form.  THE WITNESS: Again, I'm not going to speculate, because I wasn't involved in the process of how that was negotiated and reached.
